

Oral Health for Parents and their Children

Adult

Aimed at parents, expectant mothers, early years healthcare workers, teachers, nurses, GPs and the public.

Oral health is an important part of every child's wellbeing. It impacts on the ability for children to eat and sleep, to socialise with confidence and to concentrate at school. However, many children experience problems with their oral health. Tooth decay affects around a quarter of five-year olds in England and it is also the leading cause of hospital admissions for five to nine-year-olds by some distance. Many children who go to hospital because of tooth decay need to have teeth removed under general anaesthetic. This is despite the fact that tooth decay is almost entirely preventable.
